To whom it may concern,

We serviced our three 10 ton ice units with AmberTech M99. We used a treat ratio of one ounce per quart on the ice units. We saw significant amperage reduction within thirty minutes of adding the AmberTech M99. Amperage was reduced by more than four amps, and dropped from 24.2 amps to 20.1 amps. These ice units are 480-volt units. The amperage reduction has sustained the same results for three months now.

Bubba Flowers

I have been demonstrating and testing AmberTech M99 and AmberTech Grease for over a year in real industry applications. Using the Falex ASTM extreme pressure test, none of the competing lubricants results were close to those obtained using AmberTech. All of the competing products failed at a pressure of 120 psi or below (some of them at 45 psi). AmberTech did not fail at the maximum pressure allowed by my machine of 1,000 psi.

In real life industry applications:

- AmberTech was used in high-speed gearboxes on a vegetable sorting line. These gearboxes were very noisy and would get so hot you could not touch them. After adding 1 oz. of AmberTech M99 to each quart of oil, the gearbox operated quietly and the temperature cooled down to the point you could place your hand on it. I obtained the same results in gearboxes at a cotton gin and grain storage facility.
- In a commercial collard and turnip-cutting combine, the cycle saw blade was treated with AmberTech M99, resulting in more than doubling the life of the blade.
- In commercial diesel tractors, both over the road and farming, 1 oz. of AmberTech M99 was added to each quart of oil. This resulted in doubling the life of the oil, along with a 5% to 10% decrease in fuel consumption.
- AmberTech M99 was tested in 10 private vehicles resulting in a 75% extended oil life and an 8% to 17% decrease in fuel consumption.
- To verify these results, the tests were conducted over a one-year period under various conditions including weather, farming, and driving conditions. There were no lubrication failures using AmberTech.

AmberTech products truly will STOP FRICTION AROUND THE WORLD.
