

To whom it may concern,

SUREnergy is a highly reputable wind turbine installation and maintenance company located in Sandusky, OH. AmberTech minimizes the risks of component failure in wind turbines. In addition, AmberTech lowers maintenance and boosts reliability, which are the key factors in wind turbine profits and sustainability. It is vital to closely monitor a well-regulated computerized vibration program that determines the turbines lubrication components.

Climbing a Wind Turbine at 3:00am is no fun task, especially when it could have been avoided. Determining what lubricants to use in these environments has been a nightmare, and a wrong decision could cause a fire over a hundred feet in the air. AmberTech has been tested and proven for close to a year by SUREnergy and the facts are clear. AmberTech is the new standard for wind turbine reliability. Listed below are the before vibrations and the after when applying the AmberTech Grease in the Simalube automatic greasers. Note the vibration reductions from frame one to frame two. The Technology of (MSM) Molecular Surface Modification developed by AmberTech provides the perfect solution for Turbine lubrication.

After we installed – AmberTech MSM Grease

Thank you
